

UCSF Research and Academic Building at ZSFG

January 2021 Update

Recent Activity:

- Continued work in 23rd Street near Vermont for a new gas line tie in and fire hydrant. Flaggers, traffic cones, and signage are in place for this work.
- Installation of micropiles and concrete footings for the building foundation has been completed.

Anticipated Activity in the Near Future:

- Work in Vermont Street for new water and communications lines, including use of jackhammers intermittently to break up concrete. Flaggers, traffic cones, and signage will be in place. Access for vehicles will be maintained at all times.
- Work on the ground level of the new building with rebar to be followed by concrete.
- A crane to be used to assemble the building's steel frame is scheduled to arrive on site in late February.

Reminder of the Month: The RAB occupant site is updated regularly
