

Recent Activity:

- Construction of the foundation system for the new building began with installation of micropiles: drilled columns filled with steel and grout.
- Installation of concrete footings for the building foundation began on the east side of the project site and is moving west.
- Asphalt was placed on the south side of the project site to reduce dust, prevent mud, and support project deliveries and other construction activity.

Anticipated Activity in the Near Future:

- A small concrete pour for installation of new fire hydrants is scheduled for mid December on the south side of the site. It is not predicted to be disruptive.
- Work in 23rd street near Vermont for a new gas line tie in and fire hydrant is expected to start in December. There will be flaggers and traffic controls in place.

Reminder of the Month: Construction details are updated regularly
